

IODA RINSE

IODA RINSE is a highly effective sanitizer – cleaning agent containing stable available iodine. IODA RINSE is also extremely free-rinsing and will give clear, streak-free surfaces including glassware when used as a sanitizing rinse in mechanical or manual washing operations. Chelating agents are also added to this product to control water hardness and prevent scale build-up in glass washing machines.

IODA RINSE is approved by medical and veterinarian authorities as a sanitizing rinse. It is also one of the type of products recommended by the Department of Health in food establishments for cooking utensils, cutlery, glassware and dishes.

NOTE: IODA RINSE is compatible with our product BRITE which is recommended for use in mechanical washing machines.

PHYSICAL PROPERTIES:

- A reddish-brown concentrate which, when in working solution strength, turns yellow with a colour intensity that can be used as a visual concentration check.
- Contains low-foaming surface-active agents, iodine stabilizers and chelating agents

USE:

- Use as directed by the representative or salesman. Water hardness will not affect the efficiency of this material. The following guide is recommended for concentrations.

25 ppm requires: 1.3 mL/L (0.21 oz./gal.) (0.13%)

77 ppm requires: 4.4 mL/L (0.64 oz./gal.) (0.40%)

PACKAGING:

- 4 X 4 L Case
